**PMC**

**DATASHEET**

**REMOTE MANAGEMENT SYSTEM**

## PMC and PMC+ Module (Supervision of parking sites, basic card and owner management)

---

- Main Dashboard
  - Dashboard tiles showing occupancy and unit status
  - Parking site search by name
  - Online event viewer (option to pause, sort, filter, and adjust the number of displayed records)
    - License plate search, option to view vehicle passage photos
  - Full-text search by card number, license plate, or owner (allows tracking a specific card and its events across multiple parking sites)
- Parking Site Detail
  - Unit status overview (device status, control of connected units)
  - Online event viewer for the selected parking site (option to pause, sort, filter, and adjust the number of displayed records)
    - License plate search, option to view vehicle passage photos
  - Zone management (occupancy overview, current-day view, option to change occupancy and reservation counts)
  - Long-term card section (basic card management, sorting, filtering, full-text card number search)
    - Adjust the number of displayed cards, activate new cards, view card detail, apply bulk changes
  - Short-term card section (basic card management, sorting, filtering, full-text card number search)
    - Adjust the number of displayed cards, view card detail
- Long-Term Card Detail
  - Edit card parameters, assign owner
  - Deactivate, block, unblock
  - Display card events including passage photos
  - Display payment records
  - Option to extend card validity to other parking sites
- Short-Term Card Detail
  - Deactivate, block, unblock
  - Display card events including passage photos
  - Display payment records
- Service Settings
  - User roles
  - User management
  - Unit panel layout configuration
  - Display configuration for event types, categories, and colors
  - Optional sound playback for selected events at specified parking sites
  - Zone display settings
  - Site name and color configuration
  - Admin assignment per organization with user management options

## PMC Cash Module (manual cashiering on web platform, parking payment across multiple sites)

---

- Cashier interface for product payment
  - Payment for parking, card activation, card printing, reactivation, extension, paid parameter changes
- Fixed-rate payment (fines, fees, etc.)
- EV charging payment
- Paid card unblocking (fixed or time-based pricing)
- Paid duplicate card printing
- Discount card issuance and validation
- Product display by groups
- Macroproduct handling (activate card across multiple parking sites at once)
- Global antipassback enforcement
- Deposit handling and cashier drawer
- X/Z Reports
- Fiscalization support
- Card payment via terminal
- Receipt management
- User-defined products and validity periods
- Branch management and product visibility settings per branch (or cashier)
- Assign individual products to separate accounts – reporting
- POS terminal security via certificate-based authentication

## PMC ServiceApp Module (mobile service app and centralized technician management)

---

- Service request management for field technicians
- Mobile device management
- “Assign request” button in event list
- “Technician Tasks” section in site detail
- Android application
  - Display assigned requests
  - Accept request for processing
  - Close request including photo documentation
- Resolution statistics
- App branding options

## PMC Cam Module (IP camera integration, live feed in PMC)

---

- Integration of any IP camera with a specific unit at the parking site
  - (camera must support JPG snapshot display at a specific URL and be accessible from the internet)
- Live preview of the selected parking site unit at 5 FPS

## PMC Report Module (reporting module with global report set)

---

- Access to reporting module
- User-configurable output filters (parking site, time range, station, users, payment types, units)
- Export of source data to XLS/CSV including chart and graph images
- Report includes the following overviews:
  - Revenue (by parking site, station, user, payment type)
    - Revenue displayed in tables and graph visualizations
    - Receipt item breakdown
    - VAT summary
  - Cards and users
    - Total issued cards by user, station, or unit
    - Rejected cards with reasons
    - Displayed in tables and graph visualizations
  - Occupancy history (by zone, access type, card group)
    - Displayed in tables and graph visualizations
  - User activity – at parking site, remotely (via PMC)
    - Displayed in tables
  - Duration statistics (statistical reports of parking duration by access type)
  - APM (monitoring of automatic payment station activity)

## PMC IV Module (integration of VoIP (SIP) intercoms into the parking system via PMC)

---

- Remote voice communication with parking site users
- PMC and intercom connection via VoIP PBX (Asterisk), including PBX feature support
- Full VoIP call handling – connect headset or phone to PC with PMC
- Management of incoming calls
- “Call intercom” button in the unit overview of a parking site
- Call event logging in the PMC event viewer
